# Customer Project Highlight

## AtkinsRéalis | Canada Line

### The Company

AtkinsRéalis is one of the world's largest engineering and project management firms, with over 30,000 employees operating across infrastructure, energy, environmental services, and transportation. For decades, they've played a key role in building the systems that move people and power our communities.

### The Project: Canada Line

Rail projects of this scale are designed to move tens of thousands of people efficiently every day, reduce roadway congestion, and provide sustainable transit options for growing urban regions.

For example, the Canada Line spans roughly 19 kilometers, connecting major population centers through a network of 16 stations, and serves as a critical link between downtown Vancouver, key residential areas, commercial districts, and the international airport. Systems like this are not only essential for supporting daily mobility, but they play a vital role in:

- Reducing commute times, giving people back hours of their lives each week.
- Lowering carbon emissions by shifting travelers from cars to public transit.
- Improving safety, with fewer vehicles on crowded roadways.
- Supporting economic growth, as reliable transportation expands access to jobs, education, and healthcare.
- Strengthening long-term sustainability for rapidly growing regions.

PINNACLE SERIES by EAGLE POINT SOFTWARE

## The Eagle Point Software Impact

AtkinsRéalis has turned to Pinnacle Series to support project-based training and onboarding. Instead of giving project team members generalized training, they are using Pinnacle Series to deliver highly targeted, project-specific learning directly tied to the workflows, tools, and deliverables needed on this project. Before ANYONE can work on the project, they are mandated to go through the appropriate training. And if they find any errors or issues, they require the individual to re-take the training before continuing on the project.

This approach is already:

- Accelerating onboarding time
- Increasing team efficiency
- Reducing rework and design inconsistencies
- Ensuring everyone is aligned to the same standards from day one

## Why this is important:

We aren't just providing an e-learning platform. We are providing a scalable process to help thousands of engineers perform better, faster, and more consistently project after project.
